

FIX OUR TRAIL!

Are you satisfied when our brand new trail bleeds gravel onto the pavement?

Do you like skidding or slipping on gravel when walking or biking the trail?

Are you ok with the cracks on the trail that have opened up and shifted?

The city decided to use crushed limestone "flex base" to backfill the edge of the trail - it is washing out and being tracked and washed onto the trail and into the creek- the Experiment has failed!

Now they only want to replace some of it. And only fix some of the cracking pavement.

They need to replace all the crushed limestone flex base!

And all the cracked pavement!

If you are not satisfied, please go to <http://milwoodna.com> for more information on how to:

Tell the City to FIX THE TRAIL! ALL OF IT!
